

Polyurea hybrid coatings

Raw materials comparisons and starting formulation

Polyurea hybrid coatings

Polyurea coatings are considered to be one of the best in terms of physicochemical and physicomachanical properties. Polyurea linkages are formed as a result of the reaction of NCO groups with amino groups. Aliphatic polyurea are excellent as a finish coat, with some limitation to other applications due to raw materials high costs. Therefore, polyurea hybrid coatings are considered as solution with physicomachanical properties which are between the polyurea and polyurethane coatings.

Prepolymer

PRODUCT NAME	CHEMICAL NAME	APPEARANCE / COLOUR AT 25°C	NCO CONTENT, % [m/m]	DYNAMIC VISCOSITY AT 25°C [mPa·s]	DENSITY, AT 25°C, [g/ml]
Rokanate 1501	Prepolymer based on diphenylmethane diisocyanate	clear liquid, colourless to light yellow	15.0-16.0	700-1500	1.10-1.13

Polyols

PRODUCT NAME	CHEMICAL NAME	APPEARANCE / COLOUR AT 25°C	HYDROXYL VALUE [ASTM D4274-16, met. D]	WATER CONTENT [ASTM D4672-18]	ACID VALUE [ASTM D7253-16, bromothymol blue]
Rokopol EP2242.01	Hydrophobic polyol	homogenous, clear liquid, light yellow to yellow	83-93	max. 0.1	max. 0.80
Rokopol D1002	Polyether polyol, polyoxypropylenediol	homogenous, clear liquid	108-116	max. 0.06	max. 0.08

Dispersing agent

PRODUCT NAME	CHEMICAL NAME	APPEARANCE / COLOUR AT 25°C	WATER CONTENT % [m/m]
EXODis PC230	wetting and dispersing agent with anionic character	liquid	min. 97.5

Flame retardant

PRODUCT NAME	CHEMICAL NAME	APPEARANCE / COLOUR AT 25°C	WATER CONTENT % [m/m]	ACID VALUE [mg KOH/g]
Roflam P	tris(2-chloro-1-methylethyl) phosphate	homogenous, colourless liquid	max. 0.10	max. 0.10

General formulation for polyurea hybrid coating

Rokopol EP 2242.01 is polyol for hybrid polyurea coatings, showing enhanced hydrophobic properties. Starting formulation is suitable for use in polyurea hybrid waterproofing membranes. In addition, the coating from the recipe is characterized by good parameters of resistance to rain and foot traffic. These values are sufficient for industrial and construction applications.

Component A i B composition

COMPONENT B	m [kg]
Rokanate 1501	111
COMPONENT A	m [kg]
Rokopol EP2242.01	77.5
MPDiol	2.3
DETD	16.4
Coscat 83	0.2
Sylosiv A3	2.0
Pigment paste	2.0
Defoamer	0.2

Samples were prepared by Sulzer air gun Mixcoat 1500-01 or by industrial unit **The Evolution G-35H**. Water sorption tests were made using the gravimetric method. Polyurea samples, approximately 20 cm x 20 cm were immersed in tap water for 7 days at room temperature. After this period, the samples were dried of residual water and weighed immediately.

Physiochemical properties of the coat

Parameter	Result
Tensile strength, MPa	17.3
Elongation at break, %	383
Shore A	86
Shore D	34
Gelling time, s	10
Adhesion to concrete, MPa	3.3*
Tack free time, s	12
Water absorption, %	1.6

* break in concrete

EXOdis PC230 performance

EXOdis PC230 is a wetting and dispersing additive for inorganic pigments, particularly titanium white and iron oxides. The product provides excellent pigment stability in polyurea hybrid coatings formulations. The following tables present the composition of pigment concentrates (colourants) prepared with EXOdis PC230 as a dispersing agent and Rokopol D1002 as a carrier.

Formulation of titanium dioxide concentrate

COMPONENT B	m [kg]
Rokopol® D1002	33.5
EXOdis PC230	6
Defoamer	0.5
Pigment White 6	60

Formulation of iron yellow oxide concentrate

COMPONENT B	m [kg]
Rokopol® D1002	44.5
EXOdis PC230	5
Defoamer	0.5
Pigment Yellow 42	50

Results of application tests

Sedimentation

To the polyol mixture of the polyurea formulation (Component A), 2% wt of colourant was added. After 30 days at room temperature tendency to sedimentation was determined. The results, as well as comparison to colourants from the market are exhibited on following pictures:

Pigment White 6 colourants

PCC Exol colourant

Pigment Yellow 42 colourants

PCC Exol colourant

Physicochemical properties of the coat

The following table presents the physicochemical properties of polyurea hybrid coatings, coloured with pigment concentrates, prepared in the previous example.

Parameter	Pigment White 6	Pigment Yellow 42
Tensile strength, MPa	18.7	16.8
Elongation at break, %	494	520
Shore A	84	84
Shore D	33	30
Gelling time, s	8	8

EXOdis PC230 provide excellent pigment stability in polyol mixture, significantly reducing the sedimentation of pigments. The product does not affect physicochemical properties of the coat.

Roflam P performance

Roflam P (TCPP) is one of the most effective flame retardant due to the presence of chlorine and phosphorus in the chemical structure. The use of Roflam P increases the resistance of the material to the fire and reduces the rate of flame propagation in the event of material burning. The product is widely used as a flame retardant of coating and construction materials based on various type of resins.

The following table presents the results of application tests of polyurea hybrid coating after addition of 10% wt of Roflam P to the polyol mixture:

Parameter	Result
LOI, %	22.3
Tensile strength, MPa	7.3
Elongation at break, %	340
Shore A	83
Shore D	26

PCC Group

We build value through sustainable innovation

Operating in 17 countries,
in 39 different locations,
PCC SE currently employs
over 3 300 people.

Each project or venture with a long-term success story shares one common thing – it's based on in-depth market research and knowledge acquired through years of experience. It is knowledge and experience that enable us to constantly aim higher and deliver greater value through dynamic and sustainable world-wide development of the PCC Group.

The companies operating as a part of the PCC Group act with responsibility and care.

We only embark on new business challenges when we are certain that we have the skills and knowledge to achieve success. We operate in three major markets: chemicals, energy and logistics. Several dozen business units managed by PCC SE work in synergy to generate the greatest possible competitive advantage in both local and international markets. Each day nearly three thousand professionals contribute their energy and effort to secure the

sustainable development of the PCC Group. The key element of our strategy is to ensure the development of each individual business unit by taking advantage of innovative technologies and new market applications. We achieve our goals in a sustainable and responsible way – we care about the environment and the society within which we operate.

We're always striving to reach our strategic goals. Efficient and dynamic management helps our employees to fully develop their potential and, therefore, enhances the overall value of the PCC Group. Joint enterprises and individual initiatives of our companies

are the results of the entrepreneurship culture promoted within the PCC Group. Our philosophy is built on simple values - integrity, trust and reliability. We believe that following those principles is the only way to build a long-term competitive advantage.

The PCC Group currently employs over 3300 people. We operate in 17 countries, in 39 different locations around the world. Sales of the PCC Group are generated in three areas: Chemicals, Logistics, and Holding & Projects. Our portfolio includes five segments: Polyols & Derivatives, Surfactants & Derivatives, Chlorine & Derivatives, Silicon & Derivatives, and Trade & Service.
